About Skileo

We are a small communication firm that develops web and mobile projects for clients in the Boston area. We've been around for five years and we have a few big-name clients like the Department of Public Works. Our approach is all about professionalism and effective collaboration while interacting casually, in a family-like atmosphere. We offer a supportive and efficient environment, encouraging knowledge share to improve our code.

As new projects are coming our way, we are excited to offer a paid, full time based, three-month web developer internship.

About the role

You will be assigned to work on real tasks, actively contributing to development projects, so you need to be studying extensively, be in relevant formal education, or have some relevant experience with web development. This is an opportunity to learn a great deal, to gain real-world experience and to build your portfolio. And you will be the first in line for our next part-time or full-time roles.

What you'll be doing

- Working on attractive and functional user interfaces for web and mobile
- Delivering front-end according to design briefs and clients' specifications
- Working closely with designers, other developers and project managers
- Using version control software
- Improving your knowledge of HTML and CSS and refining your code writing skills
- Learning PHP
- Staying up-to-date with emerging web technologies
- Last, but not least, building your portfolio website

What we are looking for

- Knowledge of HTML, CSS and JavaScript
- Not necessarily, but ideally, basic knowledge of PHP

You are the one that we're looking for if you

- Are keen to learn on the job and improve
- Are effective at communicating within a team
- Can adapt to current workflows and best practices
- Are creative, reliable, motivated and hardworking
- Can manage your time effectively
- Have a keen eye for detail and produce work to a high standard
